

Study of Preferences Exhibited by Musk Deer in Captivity to Fodder Through Buffet Selection

R.N. Tiwari¹ and P. Jhosi²

Received on 1st January, 1981

There is no systematic list so far of plants on which musk deer can be fed although some fragmentary and scattered information based mostly on hearsays is found. Authors in this paper attempted to study 73 plant species on which preferences of musk deer were studied. Out of these, 32 species from 17 families were selected by the musk deer repeatedly, these are enumerated in the paper.
