

## **PRESENT STATUS AND FUTURE PROSPECTS OF SOME MEDICINAL PLANTS IN SOCIAL FORESTRY-AFFORESTATION PROGRAMMES**

**P.C.Sharma**

**(Received on 16.12.1998 )**

*During the course exploration in different parts of the country it was observed that some of the medicinally important tree species have been considerably depleted from their natural habitat. In the present communication, 30 species of such trees have been suggested to be grown in different agro-climatic regions of the country under social forestry and afforestation programme.*
