

ETHNOBOTANICAL RESEARCH IN INDIA- A REVIEW

Dinesh Jadhav

(Approved on 28-05-2009)

Abstract

Ethnobotany is rapidly expanding science. Janaki Ammal (1954) initiated researches on Ethnobotany in India. Jain (1960) initiated and organised broad-based ethnobotanical studies in several tribal regions of the country. He has prompted many young researchers into this discipline. Presently, there are a number of ethnobotanical studies in different tribal inhabited localities of India being carried out actively. Present paper provides the information on these types of ethnobotanical work taken up in the country.
