ABSTRACT

In kshara-sutra therapy the cutting and healing of fistulous track takes simultaneously. In some cases it has been observed that the healing status of track was not satisfactory. In that situation the healing takes more time with standard Kshara-sutra. An oil with wound healing property may be useful in reducing the overall treatment time in Fistula-in-ano. Keeping this in view and to avoid complication and to promote better healing, Madhukadi taila and Jatyadi Taila had been used along with Ksharasutra. It was found that Madhukadi Taila is more effective than Jatyadi taila in the management of Bhagandara (Fistula-in-ano).
